

Enclosures & Boxes — Procurement Decision Chain

By Wilson · 10 pages · Full report available for \$180

The category nobody thinks about. Junction boxes, pull boxes, weatherproof enclosures — type and NEMA rating specified, brand barely matters.

What You'll Find Inside

- ✓ Raco metallic boxes vs. Carlon PVC — the only real brand choice in standard enclosures
- ✓ NEMA rating system — Type 1 through Type 4X, 6P, 12 — code dictates the choice
- ✓ Hazardous location enclosures — Crouse-Hinds MLS threaded system (UL/CSA certified)
- ✓ Explosion-proof — the ONLY subcategory with real brand lock-in
- ✓ Commodity pricing — boxes sold by weight, brand adds zero margin
- ✓ Distribution dynamic — picked up at the supply house counter, never specified by name

Preview

In standard enclosures, brand is nearly irrelevant — a 4" square box is a 4" square box. The only exception is explosion-proof enclosures, where Crouse-Hinds' MLS threaded system creates genuine regulatory lock-in.
